Construction:
High impact ABS with subcomponents constructed of
acetal delrin and steel.

Lasers:
- 4 lasers total
- 2 IR targeting lasers and 2 RED aiming lasers
- IR lasers are Class1A 780nm with the option to use 850nm or 980nm
- RED aiming lasers are 650nm and are currently Class 3R which
  can be replaced with Class 1 lasers that are programable for any
  pulse length for different simulator applications

Batteries:
2 AA batteries with an expected life of approximatly22
weeks of normal use.

Electronics: 1 main circuit board with an ATMEL 328P processor
and 2 daughter curcuit boards contrilling ARC functions.

Audio:
An internal speaker provides audio for startup/power on, dart shots
fired, and ARC audio when side ARC buttons are depressed.

Saftey Select Lever (Left and Right):
On and off functionality. Each trigger pull deploys two darts (laser shots).
After second pull, 4 darts, weapon is empty. You reset the simulated
weapon by toggling the safety selector off then back on.

Rear User Indication Display Screen:
Screen displays shot count.

Future growth:
Capacity will allow the cartridge to be changed out.
